

**Supplemental Fig. S1.** The Kaplan-Meier curves for incidence probabilities of study outcomes according to variabilities in obesity measures; Kaplan-Meier curves for the incidence probabilities of myocardial infarction (A), stroke (B), and all-cause mortality (C) according to quartiles of variability independent of the mean (VIM) for body weight; Kaplan-Meier curves for the incidence probabilities of myocardial infarction (D), stroke (E), and all-cause mortality (F) according to quartiles of VIM for waist circumference.
