

Supplemental Fig. S2. Enhancement of the nucleotide-binding oligomerization domain-like receptor pyrin domain-containing-3 (NLRP3) inflammasome in glucose-treated liver cells. HepG2 cells were treated with glucose at various times; forkhead box O6 (FoxO6) levels at various times were determined by Western blotting. Samples loaded on gels were probed with α -tubulin. Expression levels of the NLRP3 inflammasome genes were noticeably diminished in HepG2 cells at 1 to 24 hours after treatment with glucose (30 mM). p, phosphorylated; IL, interleukin.
