

**Supplemental Fig. S2.** Neurofibromatosis 2 (*NF2*) overexpression fails to suppress extracellular signal-regulated kinase (ERK) signaling pathway. Whole cell lysate were prepared from *NF2* overexpression in (A) 8505C cell and (B) KTC-1 cells and examined for the expression of phosphorylated ERK (pERK) and total ERK level. The Western blots are representative of three independent experiments. Vec, vector.
